

**OLT Offshore LNG Toscana**  
**Great achievement for OLT auctions**  
***An encouraging sign for the country's energy supply system***

*June 13, 2022* - The auctions of OLT Offshore LNG Toscana for the allocation of the continuous regasification capacity, in relation to multi-year allocation processes with expression of interest, concerning Gas Year from 2022/2023 to Gas Year 2032/2033, were successfully concluded on June 10, 2022.

The regasification capacity was offered in slots of 155,000 liqcm. 34 slots of 155,000 liqcm were allocated for each Gas Year starting from 2023/2024 until 2026/2027. Overall, 83% of the authorized annual capacity was allocated for each GY, equal to approximately 3.2 billion cubic meters. In addition, all the still available capacity for the Gas Year 2022/2023, equal to 33 slots of 155,000 liqcm, was allocated.

*"In a very complex and uncertain international scenario – OLT said - the results of the auctions represent an encouraging sign for the country's energy supply system. Our Terminal will therefore be able to continue to provide strong contribution for gas supplies for the next decade".*

The Terminal is equipped with a Wobbe Index correction system installed onboard, that enables to correct the quality of LNG and receive almost all the LNG produced worldwide. Until the first quarter of 2022, FSRU Toscana received, from the start of commercial operations, LNG from: USA (45%), Algeria (11%), Qatar (9%), Egypt and Nigeria (7% each), Trinidad & Tobago and Nigeria (6% each), Equatorial Guinea (4%), Cameroon and Peru (1% each).

**OLT Offshore LNG Toscana**, a company controlled by Snam and Igneo Infrastructure Partners, owns and manages the floating regasification Terminal "FSRU Toscana". The Terminal, moored about 22 km off the coast between Livorno and Pisa, is connected to the national grid through a 36.5 km long pipeline, operated and managed by Snam, of which: about 29.5 km at sea, 5 km in the floodway and the remaining 2 km on dry land. "FSRU Toscana" has a maximum authorized regasification capacity of 3.75 billion Sm<sup>3</sup> a year, about 5% of the national gas requirement.
